MEMORANDUM TO: Chief, Headquarters Security Division/OS

FROM: 

Chief, New Building Project Office, OL

SUBJECT: Conduit Requirements for the George Washington
Memorial Parkway Visitor Control Center

1. Recently, we received a request to install conduit for secure voice and data service at the Route 123 Visitor Control Center (VCC). Installation of this conduit within the walls, floors and ceilings will be difficult and costly as construction of the Route 123 VCC is nearly complete. The George Washington Memorial Parkway (GWMP) VCC is currently being constructed. Although the concrete shell of the building is completed, now is an opportune time to address your conduit requirements. In order for us to respond to your requirements, we request that you submit your conduit requirements for the GWMP VCC by 23 March 1987.

2. Construction on the Turkey Run Road VCC will begin soon and we request your conduit requirements for this center as soon as possible.
